

RAMA INDUSTRIES

PRECISION TOOLS, PERFECT SOLUTIONS.

One-Stop Solution for Precision Tool Cutting

OUR SERVICES

**CNC WIRE-CUTTING | CNC EDM SPARKING MACHINE MAKE - SODICK
EDM DRILL | LASER CUTTING | VMC SERVICE | CONVENTIONAL WORK**

ABOUT US

Leading Industrial Solution Provider Since 1988

RAMA INDUSTRIES working in CNC EDM WIRE-CUTTING. We provide the best services and quality job works, Company having a best experienced staff with skilled workers. Rama industries Provide DIE TOOL CUTTING, PRESS TOOL CUTTING, SHEET METAL CUTTING AND JIG FIXTURE cutting as per customer Requirement. We can provide you the good idea as well as best solution for new development as per customer requirement. Since 16 years Rama Industries working in this Area. And has developed our own Tool Design as per customer requirement. We try to provide you all services in one place, we try to save your valuable time

INNOVATION AT EVERY STEP

► ON-TIME DELIVERY

With 16+ years of experience, Rama Industries is committed to delivering precision CNC and EDM services on schedule, ensuring reliability for every customer requirement.

WHY US ?

CNC Wire-Cutting

Our CNC Wire-Cutting service delivers highly precise and complex shapes with superior surface finishing. Using advanced wire EDM machines, we cut conductive materials such as copper, aluminum, and hardened steel with unmatched accuracy. This process ensures clean edges and tight tolerances, making it ideal for intricate parts and tooling applications.

CNC EDM SPARKING Machine Make - Sodick

Our CNC EDM Sparking service, powered by Sodick machines, delivers exceptional precision in machining hard materials and intricate geometries. Using electrical discharge machining technology, we achieve superior accuracy and fine surface finishes on complex components that are difficult to machine with conventional methods.

EDM Drill

Our EDM Drilling service delivers precise and efficient machining of small and deep holes in hard conductive materials. This process uses electrical discharge to create accurate micro-holes that are impossible to achieve with traditional drilling methods.

EDM Drilling is widely used in aerospace, automotive, medical, and mold-making industries for components requiring cooling holes, start holes for wire-cutting, and fine detailing in tough materials.

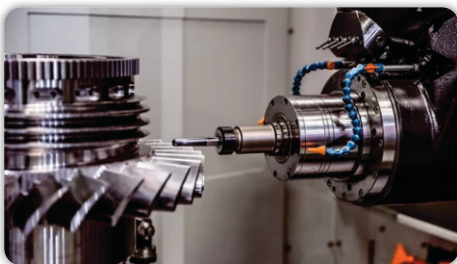

Laser Cutting

Our Laser Cutting service offers high-speed, precise, and clean cutting solutions for a wide range of materials, including metals, plastics, and composites. Using advanced CNC-controlled laser machines, we achieve intricate shapes and fine detailing with minimal waste.

VMC Service (Vertical Machining Center)

VMC machining is ideal for aerospace, automotive, mold & die, and general engineering industries, offering reliable solutions for prototypes, custom parts, and bulk production.

Conventional Work

Our Conventional Machining Services cover a wide range of processes such as milling, grinding, drilling, and rotary grinding. These traditional machining methods remain vital for various industries, ensuring precision, durability, and cost-effective production for both custom and bulk requirements.
